

OsmoNITB - Bug #1955

Investigate "Bad signalling message" error

02/20/2017 12:35 PM - msuraev

Status:	New	Start date:	02/20/2017

Description

Sometimes after BTS (observed with osmo-bts-sysmo at least) connects to BSC there's error message:

```
<001e> input/ipaccess.c:283 Bad signalling message, sign_link returned error: Operation not permitted.
```

It's originated from libosmo-abis src/input/ipaccess.c:282

It doesn't seem to affect operation (both calls and gprs works nevertheless) but it's still worth checking what's causing it (and fixing spelling of "signaling").
