<b>Target version:</b>	
<b>Spec Reference:</b>	
<b>Description</b>	
<p>libosmo-mgcp directly uses the socket API rather than going through the osmo_sock_ helpers, which is a bit odd. Not important, but deserves some clean-up eventually.</p> <p>It also has it's own RTP implementation and is not using the osmo_rtp_ abstraction based on libortp. However, contrary to the socket helpers, there might be a good reason, such as actually not introducing packet delays due to jitter buffers in the proxy.</p>
