Description

sskrodzki has made a new overview diagram, see attachment. Please integrate it at <https://osmocom.org/projects/cellular-infrastructure/wiki> and/or any other applicable places.

Please also adjust the wiki in general as you see fit.

It looks like OsmoTRX is missing. Maybe put it into a separate box on the left to show it's closer to the hardware?

#3 - 03/14/2018 04:10 PM - laforge

I think it makes the diagram more complex than needed. I mean, then we would have to also show that OsmoBTS has different PHY back-ends, and we would have to show that OsmoBSC supports Abis dialects of different BTS vendors, etc.

It's an overview picture, and the wiki has plenty of other dotty graphs with more details once you dive deeper.

- Status changed from *New* to *Resolved*

Added the new diagram and adjusted some of the text to reflect the "new world".
