Description

[Osmocom Network In The Box](#)

- MGW endpoint management has changed, there is no need to provide the endpoint range with the MGCP clients anymore. Clarify with dexter and edit away the parts concerned with that.
- GGSN routing: at the time of writing and until now I'm not a routing/iptables guru. I've since added a '-s 192.168.42.0/24' to my iptables rules to only nat for phones' IP addresses; so that whole topic might be good to review in this wiki page / the GGSN manual. It's not compulsory that we say much about that topic in our docs, but at least make sure we don't actively mislead with my half-knowledge. (BTW, I'm still seeing my nat thwarted when the docker service is running on my machine)
- replay the howto 1:1 and see if everything still works, update the attached tar of config files

History

#1 - 04/17/2018 08:15 PM - neels

- % Done changed from 0 to 30

Edited the 'mgw endpoint range's away now, and removed the 'number endpoints' as well, along with some wording about that.
