Description

It was noticed that after signing in via OpenID you may be returned (from osmocom.org/openid) to an error page (to gerrit.osmocom.org).

How to reproduce?

1. Visit some change **without being logged in**, e.g. <https://gerrit.osmocom.org/9661/>
2. Go to 'Sign in', and pay you attention at 'href' attr of the link 'Sign in with Osmocom'
3. Click on it, accept auth request at osmocom.org/openid

and then you will be redirected to:

<https://gerrit.osmocom.org/#/c/osmo-msc/9661/>

instead of:

<https://gerrit.osmocom.org/#/c/osmo-msc+/9661/>

Quick and dirty solution:

Remember I asked you to pay your attention to the link URL?

In this case it would look like this (after URL decoding):

<https://gerrit.osmocom.org/login/#/c/osmo-msc+/9661/?id=https://osmocom.org/openid>

You can copy+paste it to a new tab, and get the same result as described above.

But if you change the URL a little bit:

<https://gerrit.osmocom.org/login/9661/?id=https://osmocom.org/openid>

then the redirect would work fine ;)
