

SIMtrace 2 - Feature #3371

migrate to use arm-none-eabi build of libosmocom.git

06/29/2018 08:35 PM - laforge

Status:	New	Start date:	06/29/2018

Target version:			
Spec Reference:			

Description

We currently have some partial copied hack of libosmocom inside simtrace2.git, which is of course a bad idea.

Instead, we should use a libosmocom from libosmocom.git which was built + installed using

```
./configure --enable-static --prefix=/usr/local/arm-none-eabi --host=arm-none-eabi --enable-embedded CFLAGS="-Os -ffunction-sections -fdata-sections -nostartfiles -nodefaultlibs -Werror"
```

This library can then be used by a variety of embedded/firmware builds, such as OsmocomBB and others.
