Target version:	
Spec Reference:	
Description We may want to add some tests to osmo-gsm-tester to check interop of Cell Broadcast Services (CBS). ofono seems to support it through a dbus interface: https://github.com/DynamicDevices/ofono/blob/master/doc/cell-broadcast-api.txt However, I don't recall seeing any of the modems we currently use supporting or announcing it. It may be that it's not supported at QMI level. We may want to investigate about it.
