<b>Description</b>	
During manual testing I observed that while sms arrived on my test phone when using CBCH on SDCCH/4, they were not arriving when using CBCH on SDCCH/8.	
SI4 CBCH location was updated properly, so that was not the cause...

the problem seems to be that the L1 CBCH SAPI is never activated, even though the channel combination of TS1 (SDCCH/8+CBCH) is indicated correctly during OML bring-up.
