<b>Category:</b>	remsim-client		
<b>Target version:</b>			

#### Description

if we had a remsim-client that didn't talk to a SIMtrace/QMOD board but rather provide an ifd\_handler interface to PC/SC, we could use normal chipcard-using programs with PC/SC interfaces (like e.g. pySim-prog or libosmosim) use a "remote SIM" provided by osmo-remsim.

It als would allow us to test remsim-client without any actual hardware.
