Spec Reference:	

Description

While redmine generally supports creating automatic referencnes between commitlog messages and redmine issues (as well as automatic closing), we currently cannot use it as our Format

- Closes: OS#1324
- Related: OS#3241

is not supported out of the box.

Somebody needs to come up with a patch for app/models/changeset.rb to support the format we use.

I'm not a ruby developer, maybe somebody can help here?

Information on how the current mechanism works:
