

OsmoPCU - Bug #4845

only sent content resolution if it's needed

11/04/2020 02:26 AM - lynxis

Status: New	Start date: 11/04/2020
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	
Target version:	
Spec Reference:	
Description The PCU is always sending the TLLI in the RLC/MAC even when the content resolution is over. This would save some 32 bits per RLC/MAC	

History

I don't remember seeing this behavior you mention here in ttcn3 PCU_Tests. I'd need to check again but I'd say that's in general working correctly (no TLLI sent after contention resolution).

It may be however that I was focused on checking what the MS side was sending instead of the PCU.
