Target version:	
Spec Reference:	
Description	
<p>it would be great to only deal with signalling inside the osmo-bts process, pushing all RTP/TCH handling into a separate process similar to a media gateway.</p> <p>The main process then just sends control commands to the RTP/TCH process, particularly once the BSC instructs us to change/bind/connect the RTP socket related settings.</p> <p>Our sysmobts L1 can already put the TCH related messages into a separate queue, keeping control with the main queue.</p>	

History

#1 - 02/21/2016 04:50 PM - laforge

- Project changed from OpenBSC to OsmoBTS
- Category deleted (235)

#2 - 02/21/2016 04:50 PM - laforge

- Priority changed from Normal to Low

#3 - 06/13/2016 01:16 PM - laforge
