Features

- 7.5 ns pin-to-pin logic delays on all pins
- \( f_{\text{CNT}} \) to 125 MHz
- 72 macrocells with 1,600 usable gates
- Up to 72 user I/O pins
- 5V in-system programmable
  - Endurance of 10,000 program/erase cycles
  - Program/erase over full commercial voltage and temperature range
- Enhanced pin-locking architecture
- Flexible 36V18 Function Block
  - 90 product terms drive any or all of 18 macrocells within Function Block
  - Global and product term clocks, output enables, set and reset signals
- Extensive IEEE Std 1149.1 boundary-scan (JTAG) support
- Programmable power reduction mode in each macrocell
- Slew rate control on individual outputs
- User programmable ground pin capability
- Extended pattern security features for design protection
- High-drive 24 mA outputs
- 3.3V or 5V I/O capability
- Advanced CMOS 5V FastFLASH™ technology
- Supports parallel programming of more than one XC9500 concurrently
- Available in 44-pin PLCC, 84-pin PLCC, 100-pin PQFP, and 100-pin TQFP packages

Description

The XC9572 is a high-performance CPLD providing advanced in-system programming and test capabilities for general purpose logic integration. It is comprised of eight 36V18 Function Blocks, providing 1,600 usable gates with propagation delays of 7.5 ns. See Figure 2 for the architecture overview.

Power Management

Power dissipation can be reduced in the XC9572 by configuring macrocells to standard or low-power modes of operation. Unused macrocells are turned off to minimize power dissipation.

Operating current for each design can be approximated for specific operating conditions using the following equation:

\[
I_{\text{CC}} \text{ (mA)} = M_{\text{CHP}} (1.7) + M_{\text{CLP}} (0.9) + MC (0.006 \text{ mA/MHz}) \times f
\]

Where:

- \( M_{\text{CHP}} \) = Macrocells in high-performance mode
- \( M_{\text{CLP}} \) = Macrocells in low-power mode
- \( MC \) = Total number of macrocells used
- \( f \) = Clock frequency (MHz)

Figure 1 shows a typical calculation for the XC9572 device.
Figure 2: **XC9572 Architecture**

Function block outputs (indicated by the bold line) drive the I/O blocks directly.
Absolute Maximum Ratings

Notes:
1. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those listed under Operating Conditions is not implied. Exposure to Absolute Maximum Ratings conditions for extended periods of time may affect device reliability.

**Notes:**

1. fCNT is the fastest 16-bit counter frequency available, using the local feedback when applicable. fCNT is also the Export Control Maximum flip-flop toggle rate, fTOG.
2. fSYSTEM is the internal operating frequency for general purpose system designs spanning multiple FBs.
