

OsmoTRX - Support #3283

compile error

05/22/2018 02:59 PM - alight

Status: Rejected	Start date: 05/22/2018
Priority: Low	Due date:
Assignee:	% Done: 0%
Category:	
Target version: Osmo-ify OsmoTRX	
Spec Reference:	

Description

I received following error while compiling osmo-trx on rasbian, i have already build libosmocore-0-11-0 from source and installed but despite this still unable to compile osmo-trx, any one can help to resolve the issue!

configure: error: Package requirements (libosmocore >= 0.11.0) were not met:

Requested 'libosmocore >= 0.11.0' but version of Osmocom Core Library is UNKNOWN

Consider adjusting the PKG_CONFIG_PATH environment variable if you installed software in a non-standard prefix."

I have already build following components on Rasbian from source successfully

libosmocore-0.11.0/ libosmocore-0.96.0

History

#1 - 05/22/2018 05:52 PM - alteholz

libosmocore.pc.in sets the current version of libosmocore

this version is obtained by ./git-version-gen in AC_INIT of configure.ac (still from libosmocore)

if that version is not set correctly, the check in osmo-trx fails

#2 - 06/12/2018 04:34 PM - pespin

This task looks like the typical issue in which git pull is issued in libosmocore with a new version and it is rebuilt without running make {maintainer-,dist-,}clean + autoreconf. Leaving this task open a few more days to see if author can provide feedback, otherwise I'll close it.
