Target version:			
Spec Reference:			
Description			
It would be great to have a logo that can be rendered nicely on a black/dark background. This enables us to have black mugs/t-shirts but also stickers that don't look that "ugly" on black laptops...			
Would be great if you have some ideas about this. If not, feel free to return the ticket to me so I can see if somebody else can help out on this.			

History

#1 - 03/18/2019 08:58 AM - laforge

- Blocks Feature #3848: Osmocom stickers with black background / non-rectangular outline added

#2 - 12/01/2019 10:31 AM - laforge

[tsaitgaist](#), is there any chance we could motivate you to implement this at some point? This way we could e.g. have black t-shirts at osmodevcon 2020. Thanks!

BTW: during the last GSM team call everybody agreed that the rocketphone logo from [1] is awesome ;) I would be cool to somehow combine it with the "Osmocom" label (if possible)... Just an idea.

I will do the black design (simplified B&W osmocom logo) at the end of the year.

I've added the 36c3 design (which was not used in the end it seems) in the repo in case you want to see the rocketphone: <https://git.osmocom.org/artwork/tree/simcard/36c3>
