<b>Target version:</b>	
<b>Spec Reference:</b>	
<b>Description</b>	
<p>It would be great to have a script (which could subsequently be executed by a jenkins job) that would generate tarball releases for all our tags.</p> <p>So basically something like:</p> <pre>foreach repository:   foreach tag:     autoreconf -fi &amp;&amp; ./configure &amp;&amp; make dist</pre> <p>If some older tags don't build [anymore] we could either explicitly blacklist them, or we simply build only tags no older than N years.</p> <p>The resulting tarball releases should be collected somewhere in a directory which could then be subsequently rsync'ed to a public server/directory.</p>
