Description

While packaging libusrp for Arch Linux I ran into the following issue.
Is there anything I am missing? Where does fvirtual come from?

```
fvirtual -python -modern -keyword -w511 -outdir . gnuradio_core_INCLUDES gruel_INCLUDES volk_INCLUDES -pthread  
-l/usr/include with_SWIG_INCLUDES -l../host/include -l../host/include -l../firmware/include \  
-MD -MF python/usrp_prims.Std \  
-module usrp_prims -o python/usrp_prims.cc -oh python/usrp_prims.h usrp_prims.i  
make3: fvirtual: No such file or directory
```

History

#1 - 08/04/2020 08:33 AM - laforge

I'm sorry, I have not the slightest clue. The builds work on a variety of different distributions, see <https://build.opensuse.org/package/show/network:osmocom:nightly/libusrp>

I guess this needs somebody with archlinux experience.
