

OsmoPCU - Bug #4791

Unknown prim 2 from NS (gprs_bssgp_pcu.cpp:578)

Description	
current osmo-pcu shows the following cryptic message:	
<pre>0201009120425514 DPCU NOTICE NS: indication Unknown prim 2 from NS (gprs_bssgp_pcu.cpp:578)</pre>	
the "2" should be decoded to a textual name, and it should preferably be handled, I guess?

It should be ignored and there should be also a function which converts the 2 into status and shows the specific status code which was ignored.
