### Description

The BTS feature bits seem not to be reset after the OML link is dropped.

1. E.g. configure the bsc with gprs support.
2. Connect with osmo-bts-virtual (which doesn't support gprs).
3. osmo-bsc will reject osmo-bts-virtual because of the missing gprs features.
4. Now use osmo-bts-trx with gprs support, but the bts still get rejected.
5. Restart osmo-bsc and retry with osmo-bts-trx.
6. osmo-bts-trx gets accepted.
