Description

During BTS testing I saw that gsm_call appears to be leaked.

Setup:

sysmoBTS... configure the bind IP wrongly so the CRCX will be NACKED..

Place a call to an unattached subscriber. Hangup immediately after placing the call, sometimes wait for the network error indication. This was tested with a E71.

```
gsm_call          contains 560 bytes in 29 blocks (ref 0) 0x865d318
  struct gsm_call  contains 20 bytes in 1 blocks (ref 0) 0x87c7040
